

NIFTY100 Analyst Guide

Overview

The NIFTY100 Intelligence Platform combines ETL, financial ratios, screeners, peer rankings, dashboard screens, API endpoints, and PDF reporting.

Streamlit Home

Use the Home screen to view summary KPI tiles, sector mix, and top companies by composite quality score.

Company Profile

Search a ticker or company name, review profile details, KPI tiles, revenue/profit trend, ROE/ROCE trend, and rule-based pros/cons.

Screenener

Adjust sliders or presets, review live results, and export the visible table as CSV.

Peers

Select a peer group and compare a company against peer averages using radar charts and percentile tables.

Trends And Sectors

Use Trends for multi-metric history and Sectors for revenue/ROE bubble analysis and median KPI bars.

Capital And Reports

Use Capital Allocation to view pattern treemaps and Reports to open stored BSE annual report PDFs.

Generating PDFs

Run `python src/reports/tearsheet.py` and `python src/reports/sector_report.py` after the database and KPI outputs are up to date.

API Usage

Start the API with uvicorn src.api.main:app --port 8000. Example: curl http://localhost:8000/api/v1/health

Troubleshooting

If BSE links open slowly, it is usually BSE server speed or PDF size. If Streamlit caches stale data, click Refresh report links or restart Streamlit.
